

Manlift Training Coquitlam

Manlift Training Coquitlam - There are lots of manlift training programs that offer a review of the manlift machinery. The practicum part of the training is one more vital part of the program. In this part the trainee has chance to show their practical abilities, their ability to safely operate a manlift. A prerequisite to Manlift training is the fall protection training, which can be incorporated in the training according to the particular requirements of the client.

Course Content

The program content comprises: pre-shift equipment check and work area survey requirements; the effect of doing unsafe acts or utilizing unsafe machines, Review of load capacities, Lifting device machine definitions, safety decals and particular machine requirements, Review of related parts of the CSA Standards as well as the OHSA Standards and Review site specific Hazards, together with controls for safe operation of a lifting device.

Demonstration and Evaluation Content

The evaluation and demonstration part of the program includes: Proper personal protective equipment or P.P.E. as needed; Using a signaler or a spotter when needed; Utilizing a lift just on solid and level ground; Making use of a correct fitting harness or fall arrest device; Utilizing the lift with all other workers clear of the job location; Aware of load restrictions etc. and other specs as set out by the manufacturer; Having all associated equipment stored safely on the lift platform; Pre-shift work area survey and equipment check; Isolating off the work place when major work projects are to be finished; and ensuring a safe and smooth operating speed for various plant conditions

Each of the trainees will undergo testing to make certain that they are able to safely operate their machine.

Manlift Safety

Manlifts could be very dangerous machines because they are capable of lifting a worker 20 feet or higher in the air and that creates a particular amount of danger. Since the danger is so apparent, lift owners and operators are careful to properly maintain their equipment and follow proper operating procedures and safety measures. The ratio of accidents involving this specific machine is fairly low.

The safe use of the manlift, boom lift and scissor lift is up to the operator of that machine. They must know all of the responsibilities that go with operating the machine and how to use the lift vehicle safely. The most basic safety features on the equipment are safety decals and the operating manual. These show vital information about the operating procedures, safety machines and maintenance.

Newer lift models will come along with manuals and decals in place. Technically, the operating handbook must be stored on the lift itself. If you are purchasing a second-hand lift, it is essential to ensure that the instruction manual is included and that vital decals haven't been painted over. The restraints which prevent operators from falling and the guardrails are other important safety features. These are standard and mandatory on all kinds of lifts.
