

## **Warehouse Forklift Safety Training Coquitlam**

Warehouse Forklift Safety Training Coquitlam - The company would face claims for liability when damage and injuries are sustained in an accident at the workplace. Warehouses can be a hazardous place to work for its staff, making employee safety a top priority for the company. Warehouse safety training is amongst the most effective ways to protect staff, while minimizing expenses connected with accidents and injuries.

Warehouses hold stock that can present various dangers, particularly related to materials handling. Moving stock, either manually or using powered machinery, can cause injuries to workers' fingers, hands, feet and toes. Falling, slipping and tripping are common causes of injury. Heavy things could fall off shelves and harm workers. Forklifts and other equipment carry inherent dangers as they manipulate heavily laden pallets. Incorrect lifting is a common source of back injuries. Even nails, splinters and box cutters can lead to harm.

Depending upon the materials and goods which are being handled, the conditions of the warehouse can change from one moment to the next, specially with the equipment being utilized and the job being carried out. Due to the wide variety of potential hazards in warehouse settings, warehouse operations are regulated by many different standards. There are regulations for material handling and storage, for walking and working surfaces, and rules governing the use and selection of PPE (personal protective equipment).

Many warehouse safety regulations are common sense. Here are a number of examples of warehouse regulations all workers should be familiar with:

1. Safety is a top priority at all times when working in a warehouse.
2. When work calls for right PPE, such as gloves, safety shoes, hard hats and eye protection, they must be worn.
3. Possible hazards must be inspected and reported.
4. Observe and Obey warning signals and signs.
5. Pay attention to the job you are doing.
6. Pay attention to what others are doing nearby - specially forklifts and other dangerous machinery.
7. Make sure that stacked materials and products are stable and secured.

To be able to guarantee a safe warehouse, workers must adhere to good housekeeping regulations. Basic rules for housekeeping involves keeping the aisles and floors clear of things like for instance wires and cords. Never perch items insecurely on a surface. When spills occur, clean up immediately. Throw garbage in correct containers. Keep sprinklers, fire exits and fire extinguishers accessible. Put box cutters and other sharp tools away soon after using. Report tripping hazards like damaged or loose flooring.
