

Boom Lifts

Boom lifts are machinery that has a platform which could be lowered or raised to various heights, thus making this piece of equipment an important necessity in a wide variety of professions. Accessible in quite a few specific types such as aerial lifts, scissor lifts, and knuckle boom lifts, each type functions very specifically.

Aerial platform lifts are most regularly utilized to carry people at ski lodges who are not at ease with a ski lift. These platform lifts maneuver much like an elevator, skiers can be gradually shuffled up the mountain, stopping at stations along the route until they reach the top. Aerial platform lifts are also used in construction, moving people securely up and down the sides of multi-level building sites.

Scissor lifts are quite regularly utilized by service providers as the ideal way to securely permit workers to repair and work on cables and wires attached to poles. Phone, cable and power corporations have relied on the efficiency of this kind of boom jack for years.

The knuckle boom jack is made for use within areas of rough ground and where the need to reverse direction could be necessary. This style of boom jack has the ability to fit in tight spots where a scissor jack cannot fit. Working among numerous equipment in a manufacturing facility or in close proximity stuck between two walls, the knuckle boom additionally features a standard platform fitted with rails for protection and employee safety.

The kind of boom jack required by organizations will normally depend on the nature of the work required. Fortunately, there are suitable types for just about any job.
